Notes

Please remember that the baptisms that have been printed in this report are taken from a computer database that has been created by transcribing a variety of sources, but which for the most part is unchecked.

The sources used can sometimes be difficult to read, so make sure that you check the information provided in this report against the original. A name in square brackets indicates the apparent name in the original source prior to standardisation.

The database currently has over 1,034,000 baptisms from the sixteenth century to 1900 for parishes in both East and West Sussex. It is an incomplete database, however, and care must be taken particularly in interpreting a negative finding.
